Commercial Services

Warranted by financial benefits alone, Australian businesses are installing solar at an increasing rate.

There is no doubt that electricity prices are forecasted to increase in the future and whilst this is merely a prediction, companies are being proactive about reducing energy costs and making this financial investment as early as possible.

With finance options available, some projects have no initial outlay and are cash flow positive, having an instantaneous effect on the businesses bottom line.

Whilst cost savings drives most solar purchasing decisions, companies are also considering the positive impact it has on their brand image and green credentials.

Companies are boasting:

- Environmental responsibility
- Reduced carbon footprint
- Improved Corporate Social Responsibility

When we quote, we consider:

-  ENERGY USAGE
-  OPERATING PATTERNS
-  ENERGY CONTRACTS
-  ROOF SPACE AND SHADING

Recent Commercial Installations

- VIC School: 160KW, 200KW, 500KW
